

NORTH AMERICAN Renewables Registry™

Trusted Infrastructure for the Renewable Energy Market

For facilities located in states not covered by one of the existing APX regional market systems, the North American Renewables Registry™ provides an easy-to-use, Web-based platform trusted to create, track, manage and retire renewable energy certificates (RECs). APX systems provide complete coverage across North American voluntary and compliance markets with the greatest product transparency, accountability and protection against double counting. This facilitates the continued dramatic growth of clean energy generation and usage.

Enabling Market Participants

With the North American Renewables Registry, all participants in the North American renewable energy markets – regardless of location – are now able to take advantage of a trusted infrastructure to help manage their role in the market.

Corporations: Companies use the Registry for corporate environmental management activities and substantiation of environmental claims. It provides companies with a tangible way to demonstrate environmental and climate change leadership through the use of renewable energy and improved energy efficiency. In addition, companies benefit from the ability to easily track and manage their portfolios of RECs, energy efficiency credits and carbon avoidance with a full audit trail.

Retailers and Brokers: The use of Registry services can enhance the level of visibility, integrity, trust, and quality perception for clients, while at the same time reducing the cost of manual and paper processes to track RECs and related documents.

Utility Green Pricing Programs: The Registry enables increased administrative efficiency and public transparency in the management of Green Pricing Programs. Through use of the Registry, utilities can set up “sub-accounts” in the registry for each program and transfer RECs into each sub-account for monthly and quarterly accounting with full transparency, audit trail, and public visibility to the extent desired.

Clean Generators: The Registry provides generators with the ability to capture environmental value for clean generation. It creates a platform that places a dollar value on environmental benefits and allows clean and green generators to access an additional revenue stream or “green” premium.

APX Regional Market Systems

Advanced technology enables APX to support renewable energy markets across the US including:

Midwest (M-RETS): M-RETS tracks renewable generation located within the state and provincial boundaries of Illinois, Iowa, Manitoba, Minnesota, Montana, North Dakota, South Dakota, and Wisconsin.

New England (NEPOOL GIS): The NEPOOL GIS issues and tracks certificates for each MWh of generation produced in the ISO New England control area, including imports from neighboring control areas, and all load served.

Mid-Atlantic (PJM GATS): PJM, which spans all or parts of 13 states uses a centralized registry and accounting system or Generation Attribute Tracking System (GATS) that enables renewable electricity markets and information disclosure of generation attributes including environmental, emissions, and fuel attributes.

Western States (WREGIS): WREGIS is the accounting and tracking system designed to issue, register and track RECs to verify compliance with regulatory requirements and participation in voluntary market programs throughout the western United States.

Texas (Texas REC): The Texas REC system enables electricity retailers from any area of the state to seek out the lowest cost renewable resources without having to take physical delivery of the associated electricity.

Look to the Leader

APX is the leading infrastructure provider for environmental and energy markets in renewable energy and greenhouse gases including carbon commodities. The company is the system of choice for every major renewable energy market in North America as well as greenhouse gas markets worldwide. Users of these systems include all key market participants including brokers, corporations, generators, NGOs and government organizations. In 2008, more than 1000 companies across the US and internationally will rely on APX for integrity in environmental markets.
